Top Tips of the Lottery Masters

**Lottery Tip 1** - Stop buying so many tickets.

Playing more random tickets does not give you a better chance of winning. Your odds remain the same at approximately 14 million to 1 against!

You need to start playing smarter not more often.

**Lottery Tip 2** - Don't Buy Quick Picks or "Lucky Dips"

Quick picks and lucky dips are merely randomly generated numbers that give you atrociously bad odds of winning a prize (many, many millions to 1 against it).

You need to start choosing your picks in a more specific and intelligent way - as you will soon see.
Lottery Tip 3 – Set a Budget

You do not need to spend a fortune to increase your chances of winning on the lottery. In fact spending more money on "normal" lottery tickets can almost guarantee you will lose out in the long run.

Ray Otero spends in excess of $500 per week and has only won a few minor prizes while his friend bought only a few tickets and won the jackpot.

It's not about how much you play it's about how you play.

Lottery Tip 4 – Set a Budget

Set yourself a playing budget and stick to it!

Do not spend your rent money. Do not spend your food money. Do not spend money that you cannot afford to lose.

Only play with money that you can comfortably afford to lose.

How much you spend on tickets will depend on your budget and which system you decide to implement.

Lottery Tip 5 – Use a Proven System

The lottery is a game of probabilities.

It is not a game of luck!

You can actually guarantee yourself a jackpot lottery win (and multiple medium and small wins) simply by buying every possible combination of numbers available.

This strategy has been successfully employed many times.

However, it costs a lot of money. For example, in the UK it would cost you approximately £14,000,000.
This is not a very efficient strategy as there may be multiple winners that week and a low jackpot prize. It has though been used by business syndicates in the past to secure wins on roll-over draws.

It does work and you can try it for yourself if you have a spare 14 million pounds to invest 😊.

What you need is a much more cost effective system and one that needs a lot less capital to produce results, such as the systems reviewed at Lottery Systems Compared.

Such systems work with the law of probability and not against it and thus greatly increase your odds of winning without having to spend a fortune to do it.

**Lottery Tip 6 – Aim for Small & Medium Prizes**

Almost every lottery system in existence is designed to help you win multiple prizes. They are not designed to land the jackpot.

Although many players who use such systems do end up with a jackpot win this is largely due to a certain amount of luck.

This is no way detracts from the usefulness of lottery systems. At the end of the day does it matter if you make a million from the prize in 1 draw or you make it from multiple prizes in multiple draws?

Multiple wins soon add up and most of the lottery system users who are millionaires made their money from multiple medium wins and not from jackpot wins.

If you do happen to land the jackpot (which some system users do) then celebrate. These tips come from multiple jackpot winners so it is possible to win the jackpot...it is even possible to win more than once.

However, you should first aim for a system that can deliver small and medium wins - and lots of them!

With lots of consistent small and medium wins you will quickly begin to build up your wealth.
Lottery Tip 7 – Test the System on Paper First

Although the lottery is a game of probabilities and can be beaten with the right system you should always be wary of claims made by "lottery gurus".

Anyone who tells you that they can guarantee you a jackpot win with a system that requires an extremely small stake amount is to be taken with a pinch of salt.

Yes....you can win the jackpot...in fact I have shown you a 100% proven way to guarantee a jackpot win (if you have the money to do it) but with the type of systems that you will be using (ones that require you to spend affordable amounts of money) winning the jackpot will still be a matter of luck.

However, winning smaller prizes will only be a matter of time and amount – not luck.

Remember...you want multiple small and medium wins consistently so that you are always in profit and thus building up your winnings over time. This is how most of the "lottery system millionaires" have done it.

So, just be careful of fanciful claims being made and look for a real system that can produce real results.

When you do find a system that looks promising make sure it comes with a money-back guarantee. Or, better still; make sure it has a double-your-money back guarantee like the Lottery Master Formula.

That way you can be sure you will win no matter what!

When you get the system do not be all gun-hoe by going off and buying a truck load of tickets. Test the system first.

Choose your numbers and work them into ticket combinations in the manner outlined by your chosen system.

However, instead of actually buying the tickets just write the numbers down on paper instead – as though you had actually purchased the tickets.

Although the temptation may be there to actually buy those tickets don't do it. Neither should you give into fear – fear of "what if the numbers come up and I could have won the jackpot".
If the system is good enough to produce wins once then it can do it again. Test it before you spend money on its recommendations.

**Lottery Tip 8 – Considering Joining a Syndicate**

Lottery companies openly admit that syndicates win more often.

Why do syndicates win more often?

It's simple really. Syndicates have a larger money pool to invest in tickets.

Now, syndicates that use that extra buying power to purchase tickets in a random fashion (i.e. each member picks some numbers or they buy lots of quick picks etc.) do not win more often!

The syndicates that win more often are those that use their extra money to buy tickets that have been chosen in very specific ways i.e. by using wheeling systems so they can play with more numbers than normal (thus increasing their chances of picking the winning numbers).

For example, a 7 number lottery wheel used in a 6/49 draw (where you must match 6 numbers to win the jackpot out of a possible 49) allows you to play with 7 numbers instead of only 6.

When you match every possible combination of those 7 numbers together in groups of 6 numbers (wheeling) you have 28 tickets. That means for just 28 bucks a syndicate can increase their odds of winning the jackpot from 1 in 14 million to about 1 in 500 thousand.

Still big odds but they are considerably improved.

What's more that same syndicate now have an unbelievably high chance of winning multiple smaller prizes which as you have now come to understand is the real aim of using a lottery system.

Remember multiple medium prize wins are often better than 1 massive win.

When bigger syndicates use wheeling or add extra money to their stake they can use even more numbers and reduce the odds against them even further.
In fact large syndicates are almost certain to always come out winners when they use the correct system.

Watch as a Boston reporter wins on scratch-offs by following just 1 of these tips!

I wish you all the luck in the world when it comes to playing the lottery. However, I know that if you put these tips into practice you will start creating your own luck.
